; SCORE provides a move score based on the following:
; first, the "To" position results in taking of a piece.
; Second, the "From" position is attacked.
; Third, the "To" position is attacked.
; Fourth, "To" enables the computer to obtain a check
; and finally the "From" position is defended.
;
; The current move score is then compared with the previous best and if this is
; superior, the move is saved as the best so far.
;
